

DISTRICT HEALTH INFORMATION SYSTEM

EVIDENCE BASED DECISION MAKING

2nd Quarter Report 2015

DHIS - serving as EYES & EARS to Health Department

ACKNOWLEDGMENTS

DHIS Project acknowledges the services of its team and all the personnel who contributed in compilation of this reports, without whose efforts it would not have been possible to generate timely information; that in-turn serves as the basis for optimal decision making.

Executive Summary

District Health Information System is serving as eyes and ears to Health Department. It indicates whether the health service delivery are improving or deteriorating. The provision of timely and effective healthcare services enables the decision makers to take optimal decisions in the best public interest.

Upgraded version of DHIS was implemented in all districts level by 2009-10.

In the 2nd quarter report of 2015, the important indicators are presented in the form of tables and graphics. Districts started reporting regularly on monthly basis according to DHIS reporting format.

The detailed analysis of 2nd quarter of 2015 data is presented in this report. The overall reporting compliance of the health facilities in Khyber Pakhtunkhwa is 94% and the reporting compliance increased in this quarter as compared to first quarter.

The total OPD in 2nd quarter 2015 was 56.95 million (**April to June 2015**). Per capita OPD was 0.21% of the total OPD in 2nd quarter 2015. In Age and Gender wise analysis, the percentage of female patients were higher (59.25%) and the highest number of patients was reported in age group 15-49 years in which female were 48.88% and male were 30.90%.

Forty-three diseases are reported through DHIS online system. Out of 43 diseases, 19 are communicable and 24 non-communicable. The proportion of communicable disease was 59.57% while the non-communicable diseases were 40.43%.

Top ten diseases in Khyber Pakhtunkhwa Province, top five communicable and top five non-communicable diseases are shown in graphical representation in the report. Antenatal coverage is an indicator of access and utilization of health care services during pregnancy. During 2nd quarter 2015, the overall ANC-1 coverage in Khyber Pakhtunkhwa was 75.17% of the total expected population (3.4%). Out of total ANC-1 women, 9% were reported hemoglobin (Hb) level less than 10g/dl.

Deliveries coverage at health facilities is an indicator of utilization of delivery services provided at public health facilities. The overall percentage of deliveries conducted in Khyber Pakhtunkhwa during 2nd quarter 2015 was **22.31%** of the total expected birth (2.9%). An analysis was done to show the facility wise coverage number of deliveries conducted per month. Out of the total live births, 4% babies were born with low birth weight (<2.5kg).

Immunization coverage estimates are used to monitor immunization services, to guide disease eradication and elimination efforts and are good indicators of health system performance. The overall immunization reported coverage in 2nd quarter 2015. TT-II coverage is a measure of the percentage of pregnant women protected against tetanus/neonatal tetanus. In 2nd quarter of 2015 (45%) women were immunized against the expected population.

Children under 12 months received 1st Measles vaccine and fully immunized children under 12 months received 1st measles vaccines are 80% and 69% respectively. And **Children under 12 months received 3rd Pentavalent vaccine is 85%.**

Number of pregnant women registered by LHWs indicator reflects the performance of LHWs and the extent to which pregnant women in the catchment area have come in contact with the public health system. The number of women registered by LHWs is 63035. The analysis of deliveries by skilled birth attendance (SBAs) is 37000, which is based on the information provided by the LHWs. 58.69% deliveries were reported by skilled birth attendance in 2nd quarter of 2015 of the total number of pregnant women registered by LHWs.

Intensive-phase TB-DOTS patients 8521 and **Intensive phase TB-DOTS patients missing treatment >1 week 126 in numbers and this indicators, indicates the TB DOTS.**

2nd Quarter Report 2015**1. Reporting Compliance**

This indicator represents the percentage of public health facilities that have submitted monthly reports.

The indicator reflects compliance of DHIS data. If health facilities are not submitting monthly reports, the data from the report of the respective districts will not get entered in to the DHIS online software. This will make it difficult to analyze the data, report it and take rational decision.

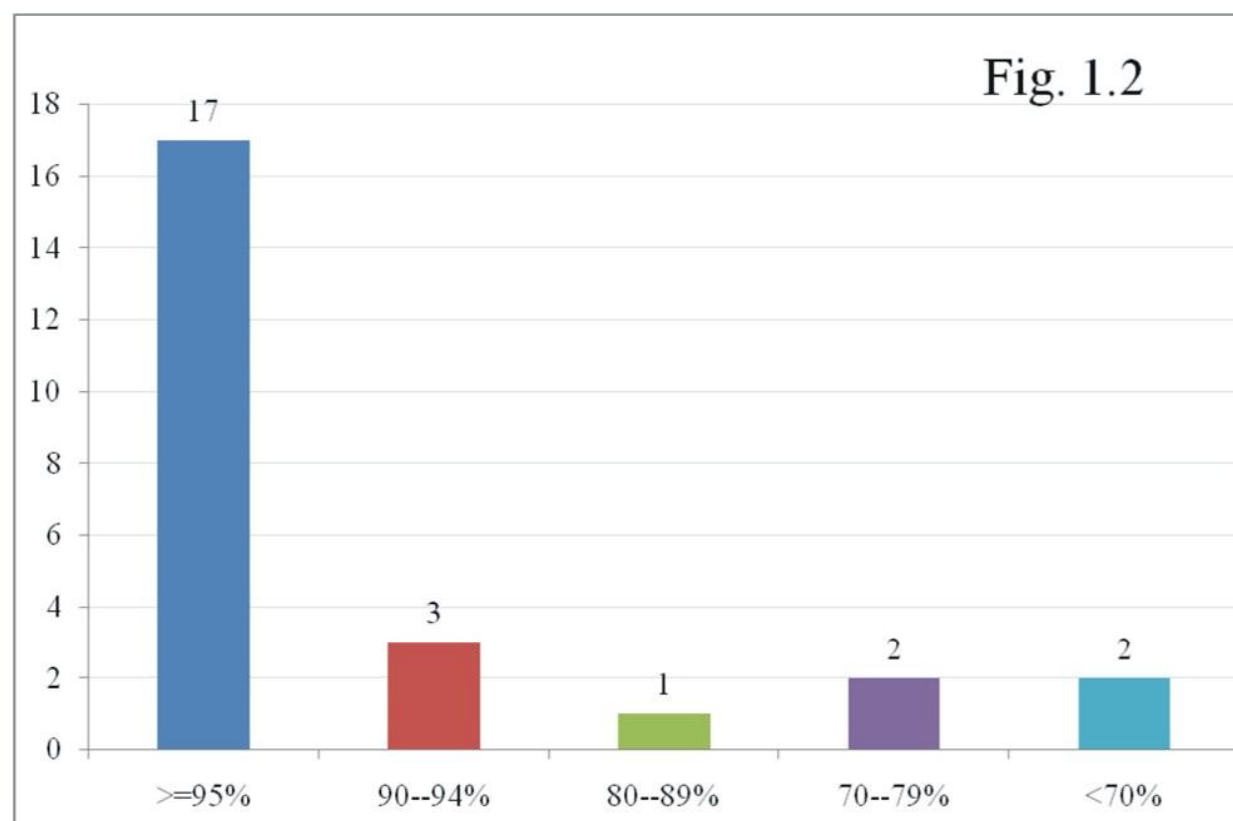

A target of 95% is set for the districts.

Seventeen districts have achieved the target.

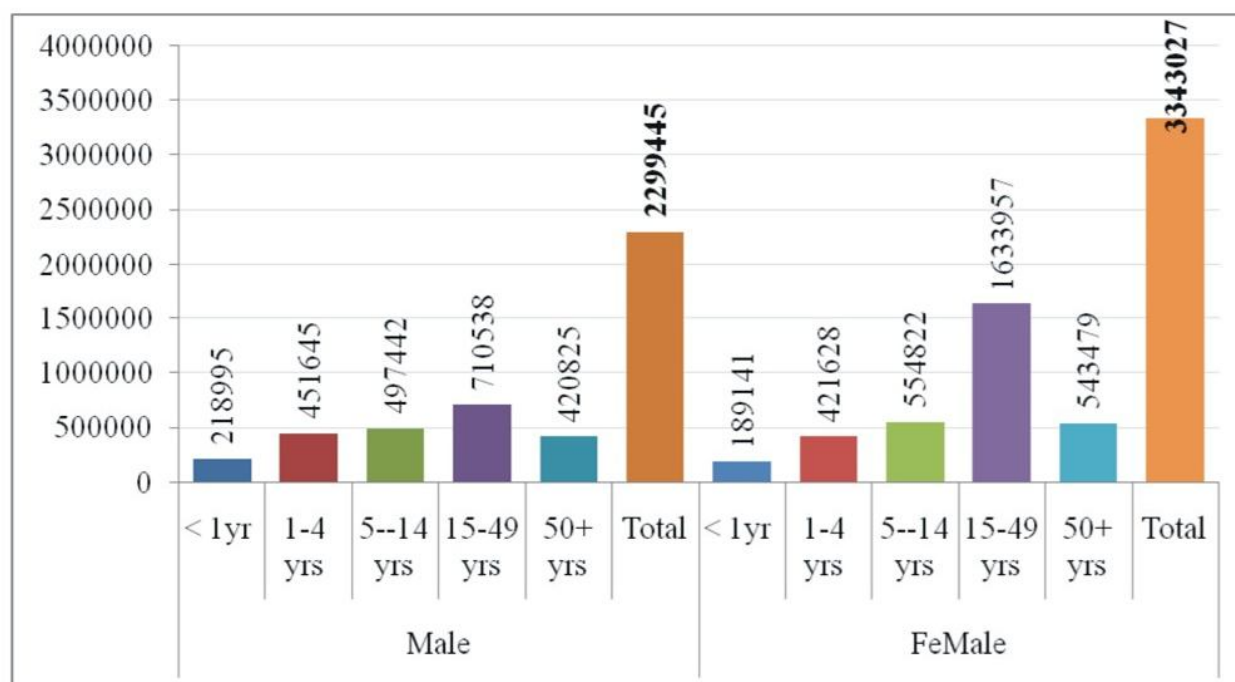

District Wise Percentage of Reporting Compliance.

Fig.1.1 shows the district-wise reporting compliance of all the districts of Khyber Pakhtunkhwa. Seven districts (Mansehra, Bannu, D.I. Khan, Kohat, Hangu, Buner, Mardan, Dir Lower) among 25 districts reported 100% performance; in addition, Twelve (12) districts attained the targets (i.e. $\geq 95\%$). Performance of other districts remained below the target. It has been requested to under-performing districts to improve their reporting. Independent Monitoring Unit (IMU) is also pressing in this regards in the larger public interest.

The breakup of the reporting compliance is highlighted in (Fig.1.2) and it is evident that 17 districts achieved the target i.e. ($\geq 95\%$) 02 districts are below with the compliance rate of less than 70%. This indicator is reflective of the interest, efficiency and competence of the staff in the districts.

1. General OPD Attendance

This is one of the key indicators to assess performance on the provision of health services in Province Khyber Pakhtunkhwa. It refers to the number of people attending and receiving services at health facilities during illness. Outpatient Attendance is taken as the indicator.

Fig. 2 shows the General OPD in secondary and primary care health facilities with gender wise breakup of male and female patients of the province.

Age wise breakup of patients visiting the OPDs is consistent in this quarter, the figures shows that in the case of male OPD attendance of age group from 1 to 14 years is **(949087)**, which is 41.27% of the total of male OPD **(2299445)**. The OPD attendance from 15 to 49 years of age group is **(710538)** 30.90% and age group of above 50 years is **(420825)** 18.30% of total male OPD.

Similarly in case of female OPD attendance of age group from 1 to 14 age group **(976450)** is 29.21% of the total OPD attendance whereas **(1633957)** 48.88% of the patients fall in age group of 15-49 years.

The overall picture depicts that more female patients are visiting health facilities as compared to male population. Hence more focus should be on providing healthcare services for female population.

3. Specialty Wise Break Up of Patients

Table No. 3

S. No	Specialty	Total New Visits	%age
1	General OPD	817305	32.10
2	Emergency/Casualty	604654	23.75
3	Pediatric	287117	11.28
4	Medicine	164235	6.45
5	OB/GYN	142582	5.60
6	Dental	95799	3.76
7	Eye	90341	3.55
8	Surgery	81712	3.21
9	Orthopedics	71095	2.79
10	ENT	60874	2.39
11	Skin	45572	1.79
12	Others	38008	1.49
13	Cardiology	20594	0.81
14	Psychiatry	14378	0.56
15	Homeo Cases	6335	0.25
16	Tibb/UnaniShifa Khana	5766	0.23
Total		2546367	

The table 3 and figure 3.1 indicate the breakup of patients visiting the facilities and attending specialist OPDs for consultations. General OPD with 32.10 of the total patients and emergency and casualty department with 23.75% of the total patients form the major chunk of the patients. Pediatric patients stand at 11.28%.

Medical patients stand at 6.45% and Obstetrics and Gynecology 5.60%. These figures should stir the policy makers and staff at the facilities to consider appropriate resource allocations. Dental diseases also deserve attention with the patients with dental disorder standing at 3.76% of the total OPD patients. The indicator gives us a pattern of prevalence of diseases.

Fig. 3.1

4. Disease Pattern in Out Patients Department

This indicator will help to understand which diseases/cases were attended at the health facilities in a district. The indicator can trigger a response in terms of additional resources allocation or redistribution according to the disease pattern, or initiating specific preventive, promotive and or curative services at specific area/catchment population.

Table No. 4.

S. No	Name	1st Quarter 2015		2nd Quarter 2015	
		Total	%age	Total	%age

40	Suspected Neonatal Tetanus	1067	0.05	715	0.02
41	Snake bites (with signs/symptoms of poisoning)	87	0.00	376	0.01
42	Acute Flaccid Paralysis	92	0.00	36	0.00
43	Suspected HIV/AIDS	12	0.00	19	0.00
Total		2154633		3242123	

The acute upper respiratory infections constitute the bulk of disease burden in the patients visiting government health facilities i.e 27.07% of the total OPD. The incident of Asthma has increased in this quarter as compare to the 1st quarter and stands at 54462 mark but the treatment facilities at the hospital remain poor.

The Diarrhea and Dysentery is indeed worrying; the total caseload of under 5 and over 5 years of patients was 17.88% of the total OPD attendance. Two issues arise out of these figures; the ineffective approach and the poor management the two issues arise out these figures.

The total caseload of ARIs and Diarrhea/Dysentery is **44.95%**, which is decreased in the 2nd quarter of this year as compare to the 1st quarter. Medicines should be made available for Asthma patients such as inhalers etc.

The decrease of patients with dental disorders especially dental caries is recorded in this quarter and the figure is **128020** which are **3.95%**. Figures seem considerable when the absolute numbers of patients are taken into consideration.

Scabies also needs attention as it causes morbidity with the OPD load of 3.1%. Though the numbers are small it has to be realized that it is easily preventable and can be treated effectively.

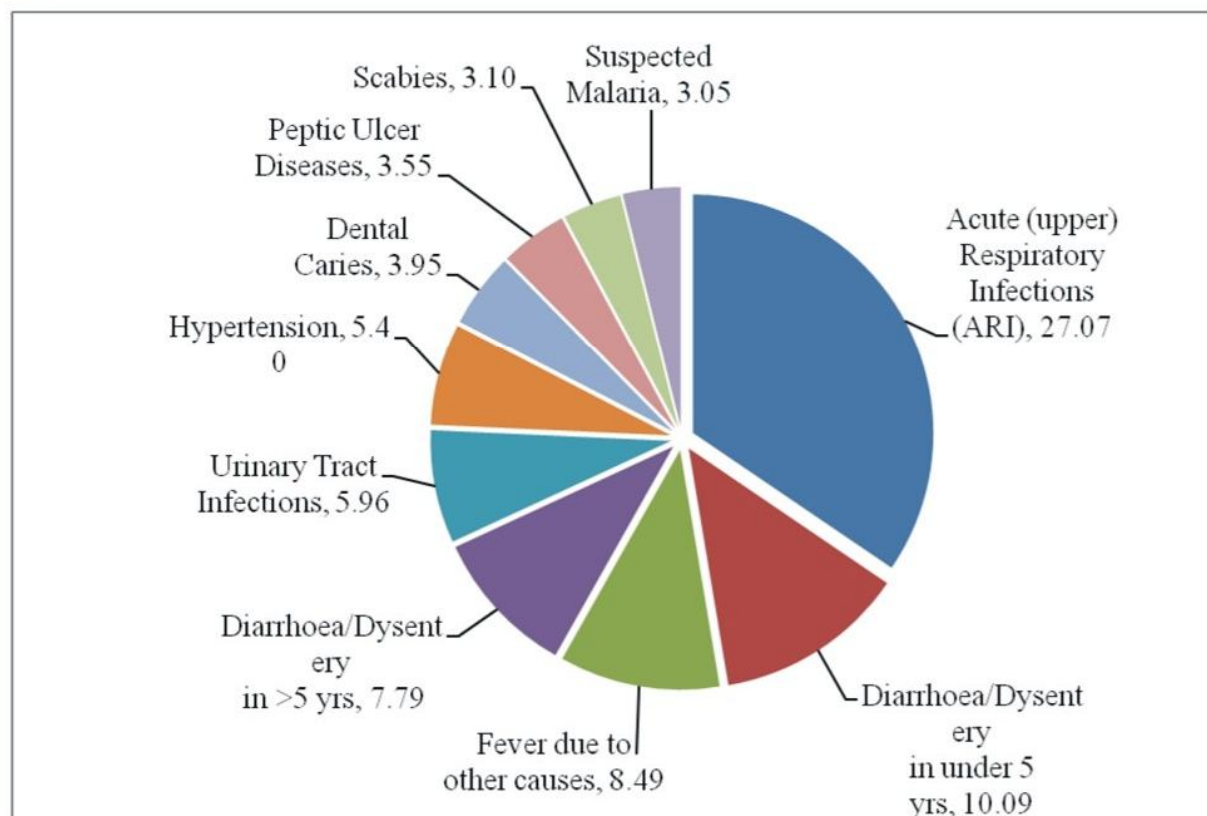

Snake bites (with signs/symptoms of poisoning) have increased from **87** in the last quarter to **376** patients in this quarter. Anti Snake Serum should be ensured at DHQs and other health facilities. Dog bites have increased from 11091 to 7628 in this quarter. Anti Rabies vaccine are limited or not available at any government health facilities and most patients have to purchase these medicines from open market at high price.

HIV/AIDS; the number of cases diagnosed in this quarter is 19, which increased from 12 as new cases in this quarter. Sexually transmitted infections have registered increase in numbers from the previous quarter i.e **3277 to 4439**.

The cases of suspected Neonatal Tetanus 715 in this quarter and reflect the performance of Antenatal Care Services programs. An aim or plan should be to bring down the cases of this vaccine preventable disease to 0 in the near future. Cutaneous Leishmaniasis disease has registered in a big number i.e 2239 in this quarter; this disease carries a significant morbidity. An immediate action required for surveillance, training and provision of the correct medications to control this threat.

Fig. 4

The figure No 4 shows the top ten diseases in the province.

5. COMMUNICABLE AND NON COMMUNICABLE DISEASE

Out of 43 priority diseases, 19 are communicable and 24 are non-communicable diseases. The subsequent analysis shows the most common diseases and disease-wise breakup.

Total numbers of communicable diseases are **1929064 i.e 59.50%** and non communicable diseases are **1310820 i.e 40.43%** of the total.

I. COMMUNICABLE DISEASES

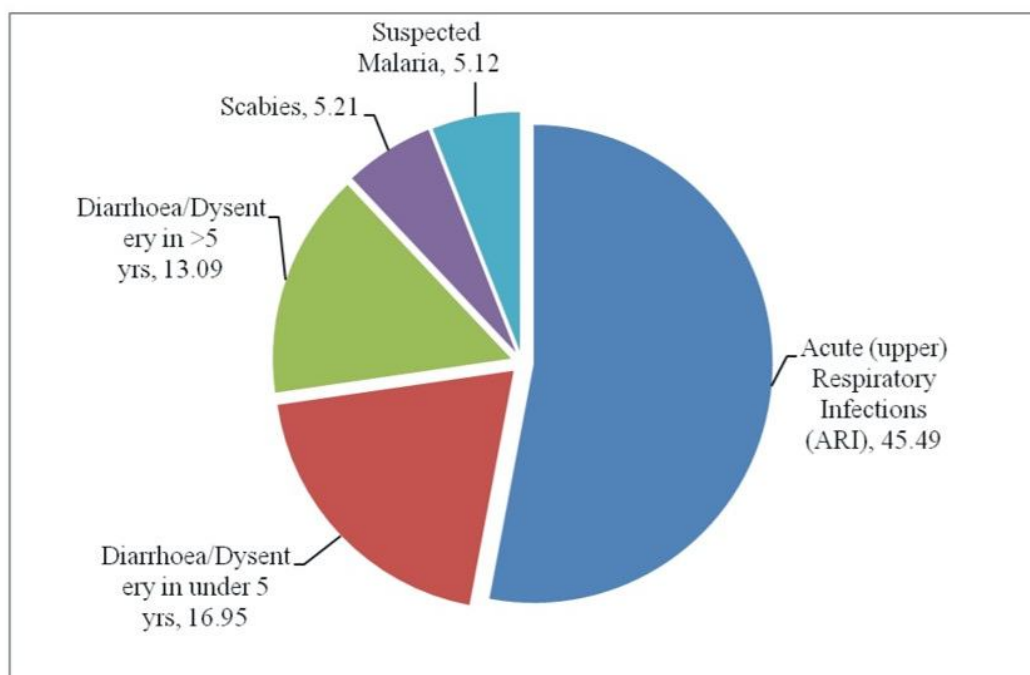

Table No. 5

S. No	Name	1st Quarter 2015		2nd Quarter 2015	
		Total	%age	Total	%age
1	Acute (upper) Respiratory Infections (ARI)	755376	57.25	877482	45.43
2	Diarrhoea/Dysentery in under 5 yrs	127459	9.66	326992	16.93
3	Diarrhoea/Dysentery in >5 yrs	101488	7.69	252610	13.08
4	Scabies	67394	5.11	100555	5.21
5	Suspected Malaria	62875	4.77	98738	5.11
6	Worm infestation	56794	4.30	81505	4.22
7	Enteric / Typhoid Fever	30297	2.30	55329	2.86
8	Pneumonia under 5 years	40092	3.04	48129	2.49

9	Pneumonia >5 years	31447	2.38	36709	1.90
10	TB Suspects	13110	0.99	18812	0.97
11	Suspected Viral Hepatitis	19900	1.51	12643	0.65
12	Trachoma	5612	0.43	8449	0.44
13	Suspected Measles	2354	0.18	4554	0.24
14	Sexually Transmitted Infections	1742	0.13	4439	0.23
15	Cutaneous Leishmaniasis	1619	0.12	2239	0.12
16	Suspected Meningitis	594	0.05	1348	0.07
17	Suspected Neonatal Tetanus	1067	0.08	715	0.04
18	Acute Flaccid Paralysis	92	0.01	36	0.00
19	Suspected HIV/AIDS	12	0.00	19	0.00
Total		1319324		1931303	

Table 5 and fig. 5.1 indicate prevalence of communicable diseases. Communicable disease constitutes around 59.50% of all the patients visiting the OPDs. Acute Respiratory Infections and diarrhea/dysentery constitute 75.53% of these patients. In general, it could be assumed that the trend would be similar and a lot of resources of the hospitals would be consumed by the patients with these disorders. Amongst other diseases prevalence of worm infestations increased and currently standing at **81505** in this quarter and needs attention of service providers to wipe it out or at-least reduce it phenomenally.

Fig. 5.1

Treatment protocol needs revision to get better results. Furthermore a strategic decision to focus at diseases having more prevalence is needed.

II. NON-COMMUNICABLE DISEASES

Table No. 5.2

S. No	Name	1st Quarter 2015		2nd Quarter 2015	
		Total	% age	Total	% age
1	Fever due to other causes	177212	21.22	275386	21.01
2	Urinary Tract Infections	124581	14.91	193294	14.75
3	Hypertension	90959	10.89	175163	13.36
4	Dental Caries	88030	10.54	128020	9.77
5	Peptic Ulcer Diseases	74992	8.98	115147	8.78
6	Diabetes Mellitus	37848	4.53	59195	4.52
7	Dermatitis	35615	4.26	56678	4.32

23	Cirrhosis of Liver	1766	0.21	2918	0.22
24	Snake bites (with signs/symptoms of poisoning)	87	0.01	376	0.03
Total		835309		1310820	

Fig. 5.3

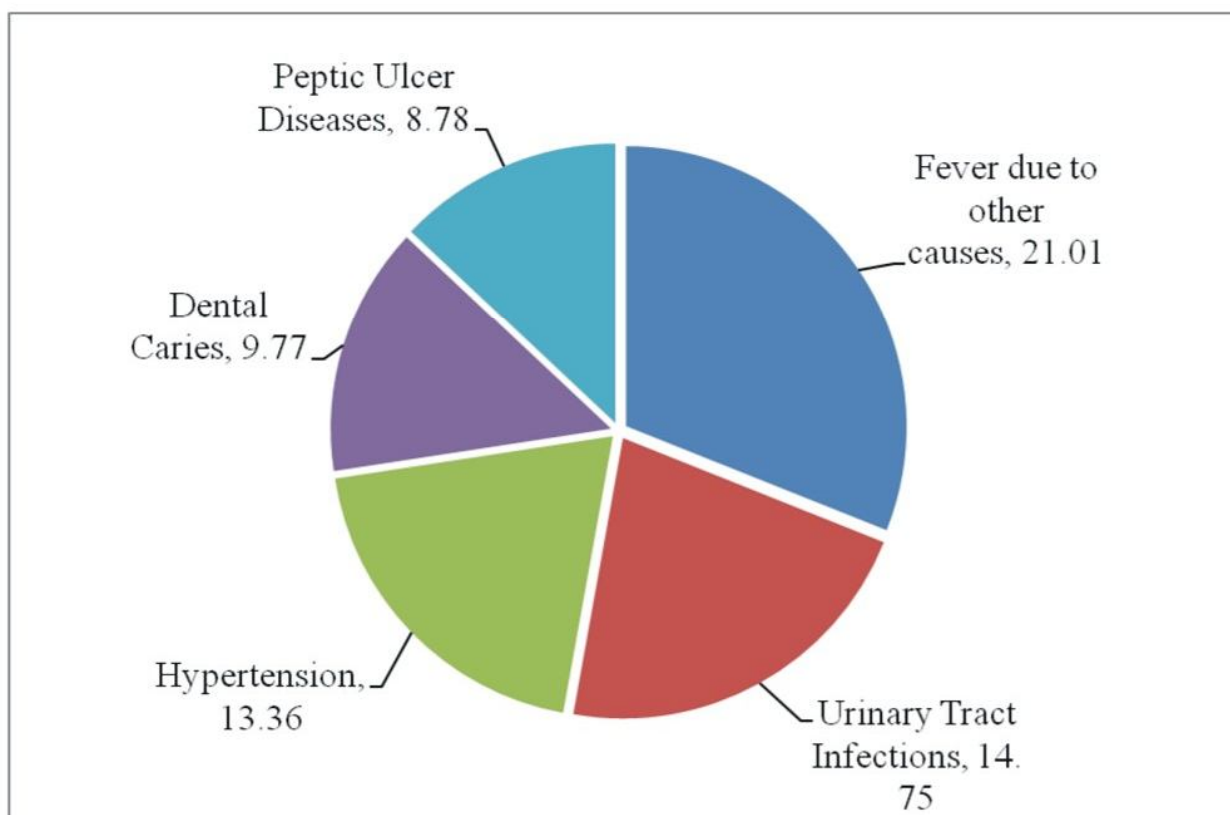

Table 5.2 illustrates the trend of non communicable diseases in Khyber Pakhtunkhwa province during the first quarter of 2015. Pyrexia of unknown origin is the leading cause which shows non-commitment on behalf of the medical staff as it should be probed in to reach a proper diagnosis. Second leading cause is urinary tract infection (UTIs) standing at **193294** patients in this quarter. Attention need to be paid to underlying causes and predisposing factors so that those can be addressed.

The patients of Hypertension and diabetes mellitus stand at **175163** and **59195** should be observed that how DHQs make purchase for these specific disorders thereby avoiding the long term mortality and morbidity.

Total **4560** burns cases have been reported in this quarter, which increased in this quarter from figure **3848** in previous quarter. It is time for necessary provisions made both in the areas of human resource and financial resources. This will try to determine the degree of burns in patients as well as their age and gender breakup to have an insight into the actual situation. Donor expertise and support may be obtained in this regards.

6. District Wise Deliveries Conducted at Health Facilities

This indicator carries considerable importance as it is reflective of the confidence shown by the general public in the government health facilities for carrying out normal deliveries.

Table No. 6

S. No	District	Catchment Population	Expected Pregnancies (3.4%)	Expected Births (2.9%)	Deliveries at Health Facilities	
					No.	%age
1	Malakand	703000	5976	5097	3116	61.13

25	Tor Ghar	0	0	0	0	0
Grand Total		26185861	222583	189852	42349	22.31

Fig. 6.1

Table No. 6 and fig. 6.1 shows a district wise break up of the total number of deliveries conducted in government health facilities reporting through DHIS. District Malakand is ahead of all 25 districts with the percentage of deliveries in government health facilities and standing at 61%.

The districts Swat, Chitral, Battagram, Dir Lower, Kohat, Buner and Hangu give a satisfactory performance and stands on 57%, 48%, 37%, 34%, 33%, 33%, and 32% respectively. While other districts show their performance below 30%.

Districts Bannu, Karak, and Peshawar below 10% mark while Torghar in on 0% conducted the least number of deliveries in government health facilities.

The poor arrangement in primary and secondary health facilities in government sector and tertiary care hospitals needs to be improved and it is hoped that by adding figures from tertiary hospitals, the percentages might be improved.

(It can give rise the conclusions either the staff of district Peshawar of government health facilities not take any interest to provide data or not providing services in health facilities. There is also a probability that a chunk of deliveries is taking place in private sector or NGOs supported poly-clinics.)

Frequency of Deliveries Conducted at Health Facilities

Fig. 6.2

The figure 6.2 shows the frequency of deliveries conducted at government health facilities on which 14 districts stands on <20%. 08 districts shows 20% to 40% while only 03 districts stands on >40%.

7. First Antenatal care services (ANC1)

Table No. 7 provide a data regarding First Antenatal care services (ANC) in government health facilities. District Tor Ghar stands at the bottom of the list and worst performance with an average 0% ANC coverage.

Some districts improved their performance in this quarter such as Swabi 67.73%, Nowshera 63.79% and Karak 28.03% as compared with 1st quarter i.e Swabi 4%, Nowshera 6% and Karak 10%.

Table No. 7

25	Tor Ghar	0	0	0	0	0
Grand Total		26185861	222583	189852	167320	75.17

Districts Kohistan, Peshawar and Malakand repeated a poor performance i.e 36.75, 36.96, 43.94 but the figures are increased in this quarter as compared with 1st quarter. (Reported the figures below the expected level at (21%, 24%, 28%, 28%) respectively).

The private sector health care facilities will take care of such services then it should be kept in mind that there is little true-private sector as the workforce performing in government set up serves as private sector in evening in the form of clinics, polyclinics, laboratories etc. Furthermore people living below the poverty line have little choice except to visit affordable government facilities for healthcare services.

Figures submitted by outstandingly performing districts (Chitral, Battagram, Swat, Buner and Dir Lower i.e 125.12%, 121.72%, 119.11%, 115.56% and 107.47%) needs review to establish authenticity.

Fig. 7.1

8. Antenatal care Revisit(s) (ANC-Revisit)

This indicator indicates that the pregnant women should be motivated at the health facility and community level to re-visit the facility for antenatal care. It can reflect the performance of the health facilities focusing at outreach thereby achieving more than one antenatal care visit to the public health facility by pregnant women. The extent of mobilization of pregnant women to utilize maternal health services forms the health facilities and or the trust of the community on the public health services providers.

Grand Total		26185861	222583	189852	42349	22.31	79890	32

Fig. 8.1

During 2nd quarter of 2015 a total number of **79890** women visited for ANC re-visits, which was **32%** of expected visit (**189,852**). The percentage of pregnant women came for ANC re-visit varies from district to district. It ranges from **0% to 49%**. Most of the districts had ANC revisits **20% to 40%**. 03 districts reported **< 10%** i.e Tank, Upper Dir and the lowest among them is Tor Ghar (**0%**).

9. Frequency of Anemia among Women Coming for ANC-1 in the facility

This indicator shows the frequency of Anemia among women coming for ANC-1 in the government health facilities. First ANC in the facilities is 91% and the women with Hb under 10g/dl are 9%.

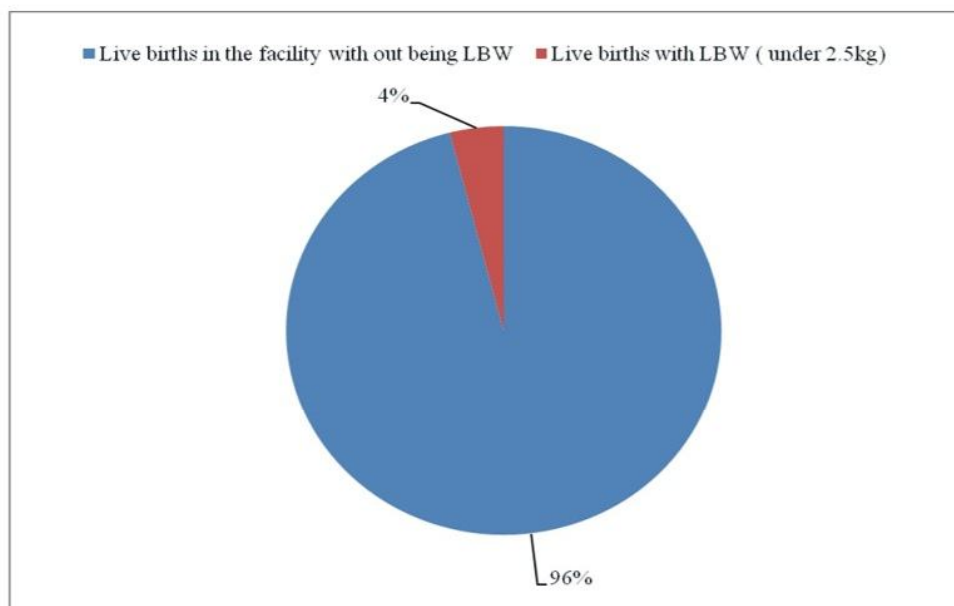

10. Frequency of Live births with Low Birth Weight (LBW) Babies (under 2.5kg)

Fig. 10

Figure 10 indicates the live births in the government health facilities and live births with low birth weight (LBW) < 2.5kg. In fig 10 total numbers of live births in the government health facilities are 96% and live births with LBW are 4%.

The live birth with LBW < 2.5kg is not only reflects the prospect of baby's long term survival but also an insight into the quality of ANC services provided to the mother before birth.

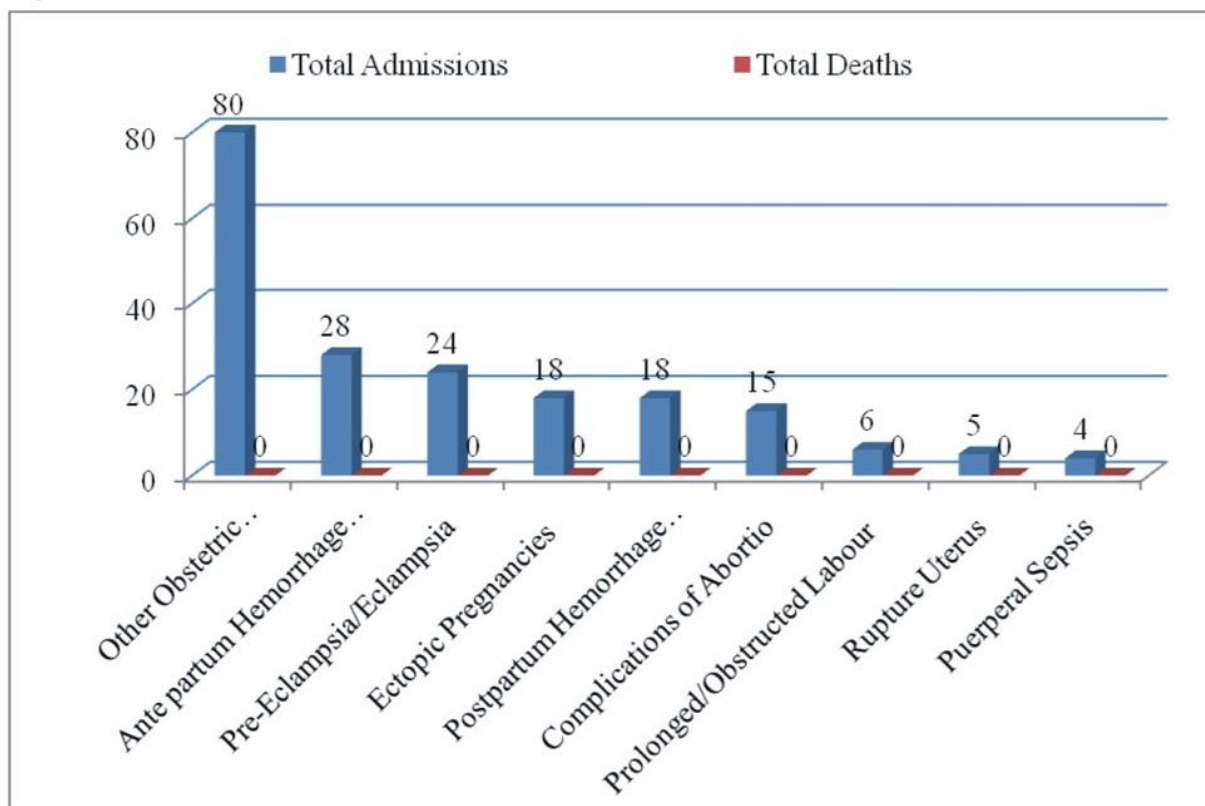

11. Obstetrics / Maternal complications

The Obstetrics/Maternal complications indicator indicates the deaths against total admissions. The total number of admissions are **198** are total number of **0** deaths are reported.

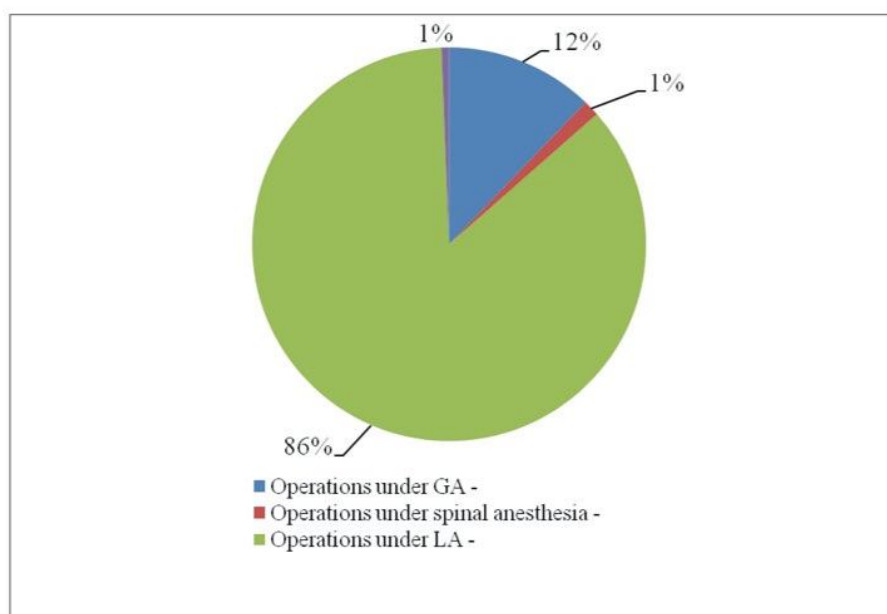

Far less admissions have been reported and the figures must be reviewed through monitoring and review process. Refresher Trainings should be given to district staff and district managers should take the lead to observe DHIS data before sending it to central data base.

Table No. 11

S. No	Name	Total Admissions	Total Deaths
1	Other Obstetric Complications	80	0
2	Ante partum Hemorrhage (APH)	28	0
3	Pre-Eclampsia/Eclampsia	24	0
4	Ectopic Pregnancies	18	0

13. Family Planning Visits

District Wise Percentage of Family Planning Visits (16% of Total Population)

Fig. 13

During the 2nd quarter of 2015, 113105 eligible couples availed the family planning services from the public sector health facilities against the expected population (16 CBA) 4,231,723. The districts were divided into 3 categories based on Family Planning visits. The percentage was highest in the district is Haripur (13.81%) and the lowest is Kohistan (0.06%).

Districts Shangla (7.50%), Chitral (7.18%) and Battagram (5.52%) shows their good performance in the family planning visits, while other districts show performance < 4%.

Table No illustrate the district wise performance in percentage of the province.

S. No	DISTRICT	Population	16% of the Total Population	Total FP Visits	%age

14. Couple-Years of Protection

Fig. 14

Couple-Years of Protection is the estimated contraceptive protection from pregnancy provided by family planning services during a one year period, based upon the volume of all contraceptives sold or distributed free of charge to clients during that period.

The Couple-Years of Protection is calculated by multiplying the quantity of each method distributed to clients provided per unit of that method. The Couple-Years of Protection for each method is then summed for all methods to obtain a total Couple-Year of Protection figure.

Figure No 14 describes the number of couples who availed the different contraceptive methods. Maximum number in figure is condom pieces provided.

The following conversion factors are currently in use in Pakistan

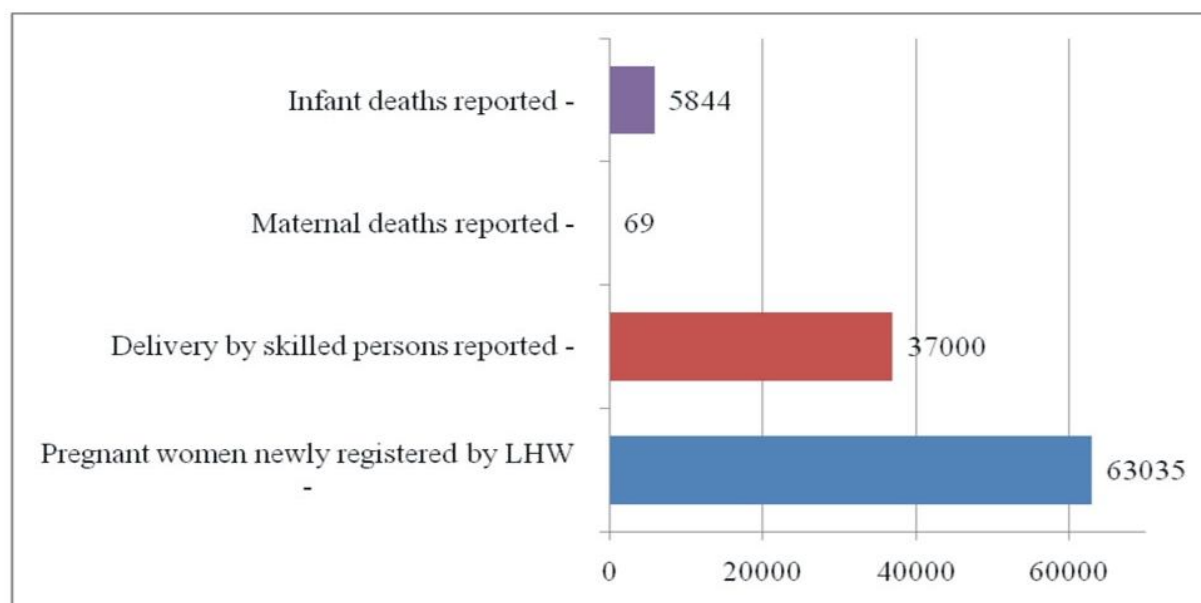

- Condoms 114 condoms per CYP
- Oral contraceptives 15 cycles per CYP
- DMPS 4 'doses' (1 ml) per CYP
- Net-En 6 'doses' per CYP
- IUD 3.5 CYP per IUD
- Norplant implant 5 CYP per device

Table No. 14

18. Intensive-phase TB-DOTS patients

TB-Directly Observed Treatment System (DOTS) is indeed an innovative and effective way of treating this disease. Tuberculosis requires regular and uninterrupted treatment for a cure and a person missing the treatment poses a great threat for developing a resistant form of the disease; so the number of patients missing their treatment for more the week need to be actively traced and convinced to continue the treatment.

Table No. 18

S. No	DISTRICT	Intensive-phase TB-DOTS patients	%age
1	Swat	2738	32.13
2	Mardan	750	8.80
3	Bannu	572	6.71
4	Mansehra	415	4.87
